

### **Manufacturing Practices**

DuMor, Inc. has been manufacturing Site Furnishings since 1984. As a metal fabrication and wood/recycled plastic processing facility, all manufacturing has been reviewed to incorporate sound environmentally friendly processes and controls.

### **Recycled Content**

As a supplier of high quality site furnishings, DuMor offers steel, wood and recycled plastic as the primary components of our products.

The steel bar and tube used in the fabrication are produced by mills which utilize both basic oxygen process and electric arc furnace process. Basic oxygen produced steel utilizes approximately 30% recycled steel and electric arc furnace steel is produced using approximately 90% recycled steel.

The recycled plastic offered by DuMor is produced from high density polyethylene (HDPE) which is derived from post-consumer bottle waste such as milk containers. The material is cleaned in a decontamination process to a purity level of over 99% HDPE. It is then compounded into a rigid board stock material; the resulting finished product containing over 90% recycled post-consumer waste by weight.

### **Recycling Scrap Materials**

DuMor has initiated recycling practices to dispose of scrap ends of materials in an effort to minimize the amount of product disposed of in landfills.

All steel scrap is sold to a steel recycling company that resells the material to mills for melting down and reprocessing.

Recycled plastic scrap material is resold to one of our suppliers of this material for regrinding and reprocessing into new stock material.

All wood scrap is sold to a local business in our area for use as a heating source.

### **Air Quality Management**

Air Quality Management- DuMor does not utilize any manufacturing process which requires venting of any exhaust into the atmosphere which would be regulated by the EPA.

### **Waste Water Treatment**

Waste Water Treatment- Again, we do not use any water in the manufacturing process of our products.

### **Machines & Vehicles**

All equipment used in the manufacturing process of DuMor products are electric generated machines which would be environmentally friendly. All forklifts that are utilized in the moving of parts and materials are inspected annually and meet low emission standards.
